SPONSOR: Reckitt Benckiser Inc.
MRID#: N/A

DATA EVALUATION RECORD

BACKGROUND:

The registrant has submitted a package in support of an amendment to register an alternate formulation of a disinfectant wipe to be used in commercial, institutional, industrial and residential settings. The package contains a Confidential Statement of Formulas for an alternate formulation and a label.

FINDINGS:

1. The label of the product declares the formulation contains 0.28 % Alkyl (50% C₁₄, 40 % C₁₂, 10 % C₁₆) dimethyl benzyl ammonium chloride as the active ingredient.
2. The concentration of the active ingredient on the Confidential Statement of Formula (CSF dated 8/27/01) is inconsistent with the concentration that is declared on the label.
3. The upper and lower certified limits for [REDACTED] should both be changed from [REDACTED] and from [REDACTED] respectively.
4. The percentages of the ingredients total 100.0.

RECOMMENDATIONS:

1. Risk Assessment and Science Support Branch finds this submission in support of registration for 777-68 to be unacceptable because of the inconsistency between the label and CSF with respect to the concentration of the active ingredient. The registrant must submit a new CSF that is consistent with the label to the Agency for review. On the resubmitted CSF, the registrant should also change the upper and lower certified limits for [REDACTED] from [REDACTED] and from [REDACTED].
